

## Special Tumble Track Beds

### How to Measure Bed

It is best to measure bed while on frame. If bed is not on frame when measured it needs to be pulled as tight as possible.

- Measure width of bed including spring holders on bed \_\_\_\_\_  
(Measure in 2 or 3 places up from the ends at least 2' – 3')
- Number of spring holders per side of bed \_\_\_\_\_
- Measure length of bed (including any spring holders or loops) \_\_\_\_\_
- What type of attachment is on the end of your bed (circle one) : Nothing :  
Webbing Loops : Metal Spring Attachments :
- If you have Metal Spring Attachments, how many? \_\_\_\_\_, what is their configuration? (eg. Distance between springs) A photo or drawing is always helpful.

\*Make sure that you have added any loops or spring holders into the length of your bed.\*

All measurements must be very accurate. Custom beds will be made to customer's measurements. No refunds or exchanges will be made on custom items. Corrections or replacements will be made at customer's expense.
