

BUSINESS GRADE

INTERNET CONNECTIVITY

Highly reliable, cloud optimised, internet connectivity for every business requirement

Our range of flexible internet connectivity solutions ensure your business stays connected. From simple single line broadband connections, through to complex bespoke solutions, our business grade internet connections are delivered over our own network and supported by our dedicated team. Our connectivity solutions ensure you get connected, and stay connected.

HIGHLY RELIABLE NETWORK

CLOUD OPTIMISED

ACTIVE MONITORING

CONNECTIVITY FOR ALL NEEDS

FLEXIBLE UPLOAD SPEEDS

EASY INSTALLATION

All Internet connections are not created equal

Unlike some providers, we actively monitor the usage of our connections and invest in extra capacity well before our customers experience any degradation of service.

We have also invested in the best quality equipment and carefully selected partners to ensure that our services consistently exceed customer expectations.

'Always on' connectivity

Our 'always on' dual connectivity package ensures your business is always connected to the Cloud. Relax in the knowledge your business can continue to operate seamlessly, even in the event of an outage.

Boost productivity with the right connection

Ongoing improvements to the UK's connectivity infrastructure allow us to provide you a range of options to suit your exact business needs and budget. The less time you spend waiting for connectivity, the more time you can spend doing business.

Enhance your cloud experience

Our connections are optimised for Cloud services such as Hosted VoIP and video calling, allowing you to enjoy crystal clear call quality and smooth video conferencing.

By using our connections customers are able to both communicate more effectively and lower ongoing costs.

Small sites with big connections

Advances in technology have drastically improved the speed and reliability of Internet connections available to small sites and branch offices.

We can now provide up to 80Mbps Fibre to the Cabinet connections to small sites for little more than the cost of standard broadband.

Connections you can rely on

Our well managed and highly uncontended network enables us to provide industry leading performance across our entire product range.

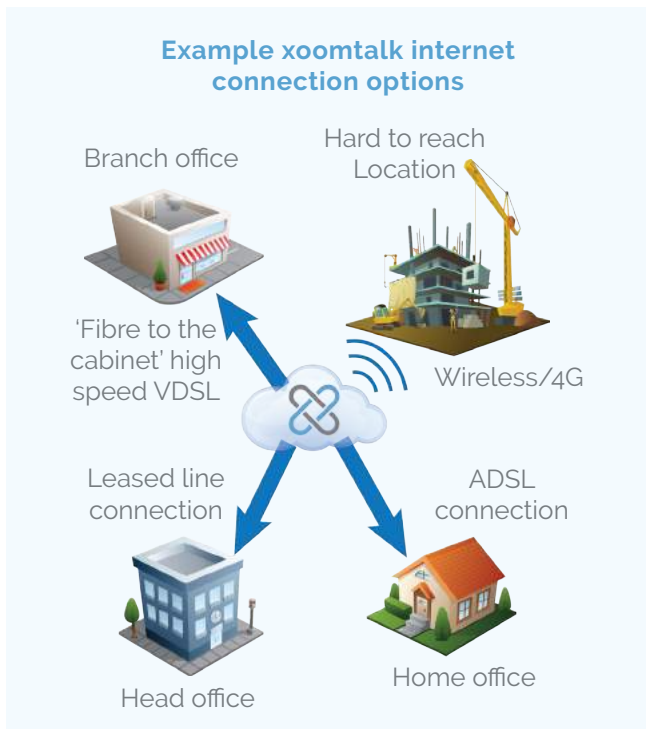

From entry level ADSL to flagship dedicated Ethernet lines, all of our connections are engineered to the same high standard, ensuring you have access when you need it.

Broadband

Our ADSL2+ services offer up to 24Mbps of download bandwidth and are perfect for small offices or home users. We also have increased upload speed options for those users with more demanding requirements.

'Fibre To The Cabinet' (FTTC)

Perfect for small offices with a greater reliance on Internet services, those sending large files or with numerous remote users. Using FTTC connections we are able to supply up to 80Mbps download and 20Mbps uploads to many locations around the UK.

Why Choose xoomtalk?

Work from anywhere

Increase customer satisfaction

Improve communications

Dedicated help desk

Clear, direct advice

Business only provider

Key Features

- Highly reliable network
- Easy to install and configure
- Competitively priced

- Suitable for all applications - including Cloud services such as VoIP telephony, online backup and real-time video conferencing
- 24x7x365 monitoring
- Increased upload capacity if required
- Work from anywhere
- Active monitoring

Ethernet First Mile & Ethernet over FTTC

Offering many of the benefits that come with dedicated Ethernet lines, EFM & EoFTTC can provide dedicated bandwidth speeds of up to 20Mbps. Ideal for those sites with needs that have progressed beyond standard broadband or FTTC due to a heavy reliance on connectivity.

Dedicated Ethernet

Provided over dedicated fibre optic connections, our dedicated Ethernet lines offer the ultimate in internet connectivity. Backed by a 99.9% uptime SLA and rapid response times, these circuits are ideal for head office sites and larger businesses.

4G Helix

Helix provides a rapid deployment, mobile, 4G solution for industries who work in hard to reach locations. Perfect for businesses who need to get connected from day one, Helix has been built and designed for industries such as construction and festivals. Capable of supporting up to 200 users, the Helix box is extremely resilient and the go-to internet solution for those who want easy to install, high speed business internet connectivity.
