

## Get connected from day one with our revolutionary, rapid deployment, 4G Helix box

Helix is a rapid deployment, mobile, 4G solution for industries who work in hard to reach locations. Perfect for businesses who need to get connected from day one, Helix has been built and designed for industries such as construction and festivals. Capable of supporting up to 200 users, the Helix box is extremely resilient and the go-to internet solution for those who want easy to install, high speed business internet connectivity.

HIGH SPEEDS

RAPID DEPLOYMENT

WORK FROM ANYWHERE

SUPPORT UP TO 200 USERS

EXTREMELY RESILIENT

EASY INSTALLATION

### The solution you've been waiting for

Instant site connectivity can finally be achieved thanks to the xoomtalk Helix device. Helix offers superb speeds and reliability, providing a fantastic opportunity for construction companies to enable their project teams, previously subject to long lead times for connectivity, to be fully operational from day one.

### Flexible contracts

The Helix is provided on a subscription basis, available on both short and long term contracts. This flexibility allows you to implement the Helix device as and when required for your business needs, getting you connected quicker.

### High speeds, wherever you are

Each Helix unit can provide up to 80Mbps of upload and download speeds from virtually any location, with minimal lead times, making it the perfect option for pre-ethernet delivery.

### Unleash the power of 4G

Using the power of 4G, Helix has the ability to bond up to 5 4G sim cards simultaneously. To ensure the connection provided is truly reliable, and will not be interrupted, up to 5 backup fail-over sim cards are installed.

### A simple design, that simply works

Helix has been designed and built with ease of use and speed of deployment at its core. It all comes packaged in one high quality, transportable, strong aircraft case with wheels and a handle. All of the required ports and power supply are available externally meaning Helix is ready to use, even without opening the case.

### The best hardware, for the best connection

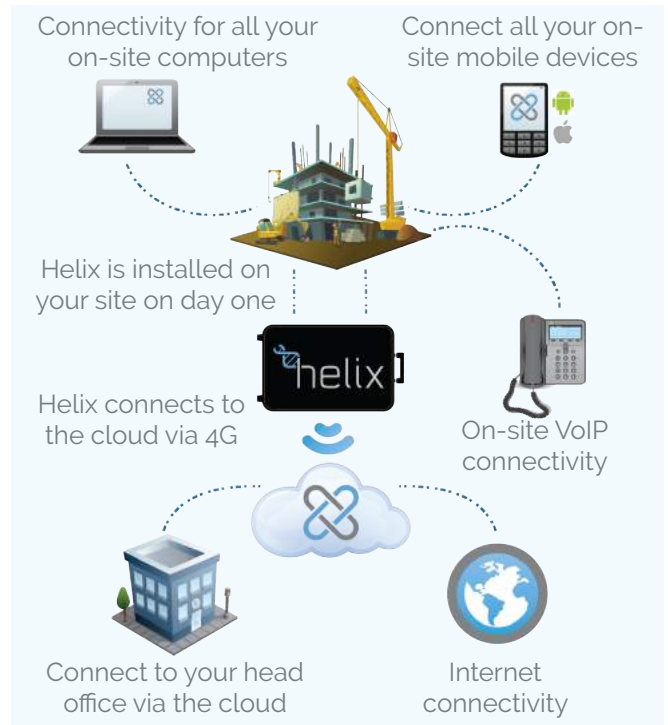

On the outside Helix is a simple black box, on the inside Helix is filled with the highest quality equipment available. By utilising premium hardware we can ensure our service consistently exceeds customer expectations.

### Optimised for all your communications

Helix was built with more than just internet connectivity in mind, it has been optimised to support all of your VoIP and video calling needs, allowing you to enjoy crystal clear call quality and smooth video conferencing.

### Installed on the very first day

Due to the unique build and revolutionary design of Helix, the installation process is amazingly simple. From the moment your site offices are established, a xoomtalk engineer will be on site to install the Helix device. This installation process is complete the same day, allowing your site to become fully operational. No more long lead times for connectivity means you and your team can get on with what's important.

## Why Choose xoomtalk?

Work from anywhere

Increase customer satisfaction

Improve communications

Dedicated help desk

Clear, direct advice

Business only provider

### Key Features

- Flexible contracts
- Data packages to support every business need.
- All size sites supported
- Rapid deployment
- Managed installation
- Full support included
- Work from anywhere
- Up to 200 concurrent users
- Extremely resilient
- Support for multiple communication applications
- High upload/download speeds

### Connect any size team

Helix is capable of supporting large on site teams with high speed internet connections, enabling all of their communication applications. Multiple package options are available, ensuring smaller sites with smaller budgets can still access the power of Helix.

### Custom Packages

The flexible contract lengths offered with Helix are complemented by flexible data packages. At xoomtalk we understand that data usage varies from business to business, that is why we offer data packages to suit every business need, meaning no hidden fees or surprises.

### xoomtalk make it easy

We realise that your time is precious, this is why xoomtalk engineers manage the entire installation process for you. You will be provided with dedicated contacts for the entire roll-out of services, giving you access to our team of experts whenever needed. Our primary aim is to ensure your site gets connected in the fastest, easiest and most reliable way.
