Simplifies tire management by automatically generating fleet-wide reports on tire maintenance and its quality.

The TireVigil™ Cloud's **Report Service** automatically generates reports on tire service with specific daily, weekly and monthly reports designed to improve tire maintenance, simplify tire service management, and deliver tire maintenance visibility to you and all other interested fleet personnel. You and other specific fleet users can designate the reports you want and schedule the days and times to receive them. The TireVigil™ Cloud's **Report Service** also understands that each fleet may be organized differently and individuals can be assigned to different locations and functions which require their reports to focus on their specific areas of responsibility.

The Active Issues Report identifies all tire issues that have generated alerts and the service required to correct them. It is usually run daily before drivers arrive and is used by technicians to address these problems before drivers depart on their assigned routes. You prioritize and assign resources to ensure proper tire service is performed. All tire issues/alerts from previous reports that remain outstanding are listed with the number of days they have been in alert conditions highlighted to ensure that alerts are acted upon in a timely manner and don't fall through the cracks.

The Service History Report summarizes the quality of the previous week's tire maintenance. This report details each tire problem that was serviced and how it was corrected. Service that does not meet the fleet's standards is highlighted so corrective actions can be taken. When tire problems are resolved on the road, service events are captured automatically. This enables you to determine if the work was needed, done, and performed to your fleet's specifications when verifying tire service bills without leaving your desk.

You also receive a monthly report on the state of all tire pressures across your entire fleet. The Fleet Management Survey Report enables you to compare tire service performance at your fleet's various locations. You can also use this report to reward tire maintenance improvements and recognize safety contributions for reducing alerts and alert response times.

The Leader In TPMS Innovation

TireVigil™ Cloud's Report Service

Report Service Benefits

- The daily Active Issues Report provides labor saving tire visibility that can eliminate 90% of enroute breakdowns.
- The weekly Service History Report provides visibility of the tire service performed the previous week along with verifiability and accountability.
- The Service History Report shows the details for each tire serviced including how it was corrected, the date, time and location of the service, the vehicle number, wheel position, and the state of the problem tire before and after servicing. It also provides the target tire pressure, tire temperature, alert severity, the name of the servicing technician and any observations made for each tire.
- Service that does not meet your fleet's standards is highlighted.
- Enroute tire service events are captured automatically with location, date and time. This enables you to verify service bills and validate that the work was needed and performed properly right from your desk
- You receive monthly reports on the state of all tire pressures on 100% of your fleet's vehicles. No more time-intensive, manual, tire surveys that just take a sample of your fleet's tire pressures and guessing how all the tires in your fleet are maintained.
- The saying, "You can't manage what you can't measure" is true and the monthly Fleet Management Survey Reports give you the metrics you need to compare tire maintenance performance by yards as well as see changes across your entire fleet. It also provides a breakdown of the types of tire alerts your fleet experienced, the average response times to correct them, and provides insights into potential tire fires by vehicle types experiencing excessive heat.
- You can use these reports to recognize improvements in tire maintenance as well as improvements in safety for reducing alerts and response times.

TireVigil™ Cloud's **Report Service** has been designed by tire professionals to simplify tire service and is another tool for you to use to improve your tire maintenance program.
