The app designed by tire professionals that simplifies tire service, prioritizes tire issues, and assists management in building an effective tire maintenance program.

The TireVigil™ Cloud's **TireWatch Service** is an essential tool for improving tire maintenance by providing real-time visibility of all tire issues. Maintenance staff prioritizes and schedules tire service based on advanced visibility of developing tire issues. This process is now easy, fast, and error free!

Technicians address each alert issue as well as review all of the vehicle's tire pressures to ensure they meet fleet targets and make minor adjustments to proactively maintain tires before alert levels are reached. TireWatch also records all tire pressure adjustments and automatically closes alerts when resolved.

Our tire software developers have built many special features into TireWatch that technicians appreciate since TireWatch speeds-up and automates many of their mundane servicing tasks. Highlights include: automated TPMS sensor wheel position discovery, fleet customized terminology for wheel assignments, fleet customized tire rotation patterns with drag and drop ease and accuracy, automated TPMS equipment testing, built-in wizards that capture tire service, calculation of cold inflation pressures and operation on the latest wireless mobile devices. It also records all tire service events which are included on weekly management reports that verify service quality compared to fleet specifications.

TireWatch keeps you up to date on all tire issues and confident that your tire maintenance program is running smoothly.

All your tire technicians need for servicing your fleet's tires is a tablet, a connection to local WiFi within all service bays and yard servicing areas, and a TPMS trigger tool that enables the sensor in each tire/wheel assembly to automatically identify itself. This eliminates manual data entry and prevents human data entry errors from corrupting your data.

By knowing how long tires can run before they reach catastrophic alert levels, enroute tire-related breakdowns are eliminated, operations are not disrupted unnecessarily, tread wear and casing life is optimized, fuel economy is maximized and safety is improved.

The Leader In TPMS Innovation

TireVigil™ Cloud's TireWatch Service

TireWatch Service Benefits

- You now have continuous visibility of your fleet's vehicles and tires 24/7 and the ability to prioritize and schedule service to address tire problems as they develop.
- Accurate tire service instructions enhance your tire technicians' service quality and speed up the time vehicles are in your service bays.
- TireWatch enables service to be prioritized and service reminders help ensure that no issues go unchecked.
- TireWatch provides you with increased confidence that everything is working correctly when a vehicle leaves the service bay.
- You now have the visibility and tools you need to better manage tire maintenance on all your fleet's vehicles and increase overall vehicle uptime which is the number #1 objective of every fleet maintenance operation.
- Unlimited usage of the TireWatch servicing app is included with your TireVigil™ Cloud Service subscription.
- Technicians love the simplicity of recording their tire service as it follows your fleet's existing service processes and is easy, fast, and error free!
- Your technicians will appreciate your investment in the latest technology tools.

TireWatch Service, the app designed by tire professionals that simplifies tire service, prioritizes tire issues, and lets you get ahead of serious tire problems.
