## **16 g/t Gold over 0.39 metres in drill core from Brett Gold Property, Vernon BC Canada**

Vancouver, B.C. - (April 25, 2017 ó TSX-V: XIM) Ximen Mining Corp. (the "Company" or "Ximen") is pleased to announce analytical results for drill core samples collected recently from hole 2016-21, drilled on the Company's Brett Epithermal Gold-Silver Property, located 30 kilometres west of Vernon, BC. This drill hole was part of an HQ diamond drilling program consisting of 16 holes totaling 2364 metres completed during July - September, 2016 on the Brett Property. Drill hole 2016-21, testing the northern region of the Main Zone, intersected gold and silver bearing intervals. Drill hole coordinates and initial core sample analytical results were reported by the Company in the November 21, 2016 News Release.

Ximen recently completed additional sampling and some re-sampling of drill core from the 2016 program. Core sample analytical results for the recent sampling were reported by the Company in March 9, March 20 and April 3 News Releases, the highlight being a 0.30 metre core length sample from drill hole 2016-1 returning 112 g/t (ppm) gold and 263 g/t silver consisting of quartz veining (plus or minus carbonate) and silicification. The true thickness of this intersection is unknown. Hole 2016-1 was drilled at the Main Zone in the area of the adit.

The Company has received analytical results for hole 2016-21 core samples, which tested the northern area of the northwest striking Main Zone. This hole was drilled at an 80 degree dip to the northeast (60 degree azimuth) for a total length of 191.24 meters, being collared approximately 485 meters northwest of hole 2016-1. Initial drill core sample results for hole 2016-21 included 2.38 g/t Au and 5.5 g/t Ag over 1 metre core length at 83.0 - 84.0 metres (true width is unknown). The more significant results (at a 1.0 gram cutoff value for gold) of the recent sampling of hole 2016-21 drill core include the following (length is core length):

- 63.60 - 63.94 metres (0.34m): 3.61 g/t Au and 133 g/t Ag
- 190.85 - 191.24 metres (0.39m): 16 g/t Au and 18.1 g/t Ag

The true thickness of each of the preceding mineralized intervals is unknown.

The interval at 63.60 - 63.94 metres is a quartz-flooded and silicified zone with pyrite. The interval at 190.85 - 191.24 metres is a tuffaceous unit with quartz-carbonate veinlets and pyrite.

**Drill Hole 2016-21: 190.85 - 191.24m (to end of hole): 16 g/t Au and 18.1 g/t Ag**

Christopher R. Anderson of Ximen Mining Corp. stated “we are excited regarding hole 2016-21 results. The hole, in the northern part of the Main Zone, intersected three gold bearing intervals of which high grade gold was intersected at the bottom of the hole. It is unclear of the extent of the lower gold bearing interval due to the final sample extending to the bottom of the hole. This part of the main zone will be one priority area during the next drill program.”

The core samples were cut with half core samples submitted for analysis. In minor cases where core was re-sampled, the existing half core was quartered with quarter core samples submitted for analysis. At ALS Minerals, the samples were crushed to 90% less than 2 millimeters; riffle split off 1 kilogram; and split portion pulverized to better than 95% passing 106 microns. The pulverized portions were analyzed for gold by Fire Assay and Inductively Coupled Plasma - Atomic Emission Spectrometry (ICP-AES) and for 33 elements (including silver) by four-acid

and ICP-AES. The sample at 190.85 - 191.24 metres was also analyzed for gold by Fire Assay and Gravimetric Finish.

David Martin, P.Geo., a Qualified Person as defined by NI 43-101, is responsible for the technical information contained in this News Release.

### **About Ximen Mining Corp.**

Ximen Mining Corp. owns 100 percent interest in all three of its precious metal projects. Ximen's two Gold projects, The Gold Drop Project and Brett Gold Project are located in southern British Columbia. Ximen also owns the Treasure Mountain Silver project adjacent to the past producing Huldra Silver Mine. Ximen is a publicly listed company trading on the TSX Venture Exchange under the symbol XIM, in the USA under the symbol XXMMF, and in Frankfurt, Munich, and Berlin Stock Exchanges in Germany under the symbol 1XM and WKN with the number as A1W2EG
